

2018 Tree Sale

The Annual Tree Seedling Sale of the Franklin County Conservation District is now in progress. This excellent stock comes from a state certified nursery. Seedlings must be purchased in bundles of 25 per species. This insures that you are receiving top quality seedlings since packets will not have to be opened upon arrival from the nursery.

Orders may be placed by stopping in at the Franklin County Conservation District office at 185 Franklin Farm Lane, Chambersburg, PA 17202, or by mailing the order form below, along with **your check payable to the F.C.C.D., no later than March 16, 2018**. Please add 6% sales tax on all orders for non-farm use. **All tax -exempt orders must submit a tax-exempt form with their order, to ensure that your order can be processed.** This order form is also on our website at <http://www.franklinccd.org>.

DOUGLAS FIR—This extremely hardy tree has short, soft blue-green needles. Grows fastest in moist, well drained, light soil, in full sun. Will not do well in heavy, wet, clay soil. It is the largest lumber-producing tree in America. It is also the most popular Christmas tree because of its color, symmetrical form and ability to hold its needles for a long time.

CONCOLOR FIR - Soft needles vary from silvery-blue to silvery-green. Grows best in well-drained soil and full sun. Will not do well in heavy, clay soil. This narrow, pyramidal fir is one of the best for northern gardens, noted for withstanding heat and drought better than most firs. A good timber tree as well as an excellent choice for a Christmas tree.

SCOTCH PINE—Native to Europe, tolerant of various soil and moisture conditions but intolerant of shade. Typically reaching 70' in height it can attain 120' with a diameter of 3'-5'. Widely planted for reforestation and horticulture, with occasional escapes from cultivation.

EASTERN WHITE PINE—Fast growing to 100 feet. A five needled pine, with soft, light green-blue needles, 4 inches long. Can tolerate dry, rocky soil. Grows in normal moisture conditions but can tolerate wet, swampy areas. Excellent ornamental tree for specimens, naturalizing, windbreak or dense screen. Also widely used for Christmas trees and timber.

AUSTRIAN PINE—Excellent specimen for naturalizing. Also good for thick screen or windbreak. Height 50-60 ft. Spread 20-40 feet. Dense pyramidal growth. Can Handle ordinary soils to poor soils and dry, rocky, windy conditions

Tree Sale Descriptions

NORWAY SPRUCE - Fastest growing of the spruces. Develops strong graceful branches that are covered with dark green needles. Makes an ideal windbreaker. This tree grows at a medium to fast growth rate and does well in full sun. The Norway spruce also makes a wonderful wildlife habitat.

COLORADO BLUE SPRUCE—Its stiff silvery-blue to bluish-green needles are 1” long. A handsome ornamental specimen in a single planting or as a dense, colorful screen or windbreak. Likes ordinary soil, average moisture, and full sun. Does not like wet soil.

WHITE FLOWERING DOGWOOD—Dense lustrous, green foliage, turning bright scarlet in the fall. Clusters of white flowers up to 5” in diameter bloom in late May, giving way to bright red berries in the fall. Does best in rich, moist soil, but is known to grow well in average well drained soil.

SUGAR MAPLE - Often called Rock or Hard Maple. Height 60—75 feet. Spread 45—50 feet. A landscape standout. Medium to dark green leaves turn yellow, burnt orange or red in the fall. A good timber tree. Native to Northeastern United States. Tolerates shade, likes well-drained, moderately moist, fertile soil.

RED OAK - The fastest growing of all oaks, grows to 70 feet with equal spread. Desires sandy to rich loaming soil in full sun, valuable timber tree.

SAWTOOTH OAK - A large round-headed tree growing 40—60 feet and as wide. Gobbler acorns are smaller than regular sawtooth strains, but produce twice as many nuts. Acorns are excellent food for wildlife. Disease and insect resistant.

REDBUD – This is a small deciduous tree, reaching a height and canopy width of around 20’. The trunk and limbs are slender with a zigzag array. During the spring and early summer, this tree produces vibrant dark-light pink flowers, with a small pea-like fruit to follow in fall. These characteristics make for a great ornamental and/or landscaping tree.

We expect the seedlings to be available for pickup around the middle of April. Those that have ordered tree seedlings will be notified by mail of the pick up date and will receive a map of the pickup location.
